

PLEASE JOIN US FOR AN IDENTITY MANAGEMENT ROUNDTABLE EVENT

In today's business environment many organizations face heightened requirements for security and compliance. Leading companies are using Identity Management technology to improve security and regulatory compliance, while reducing cost, simplifying administration, and improving their users' experience. At this Roundtable event, hear your peers discuss how they are using Identity Management solutions to:

- Securely control access to sensitive content and data
- Improve users' experience by enabling single sign on for key enterprise applications
- Provide an auditable trail of how access privileges are granted for data and resources
- Dramatically reduce the time needed to provision new employees
- Reduce administration costs through delegated user administration and self-service password resets

With Oracle's Identity Management technology, authorized users can gain immediate access to key enterprise applications based on a single login. Access to data and applications is controlled based on the user's role, and administration is simplified with enhanced tools that allow you to seamlessly integrate directories within and outside of the firewall - without the overhead of synchronization. Regulatory compliance is streamlined with the ability to audit, log and report these privileges.

AGENDA
